

### Faculty

**Don Van** (2001). Professor and Department Chair. B.S. and M.S., University of Illinois in Chicago; M.S. and Ph.D., New Jersey Institute of Technology; P.E., CEM.

**Jay Bernheisel** (2006). Associate Professor of Engineering. B.S.M.E. and M.S.M.E., Rose-Hulman Institute of Technology; Ph.D., Northwestern University; P.E.

**Georg Pinggen** (2010). Assistant Professor of Engineering. B.A., Samford University; B.S. and M.S., Washington University; Ph.D., University of Colorado.

**Jeannette Herring Russ** (2002). Professor of Engineering. B.S., Mississippi State University; M.B.A., Colorado State University; Ph.D., Vanderbilt University; P.E.

**Randal S. Schwindt** (2004). Associate Professor of Engineering. B.S., Hardin-Simmons University; M.S., Texas A&M University; Ph.D., University of Illinois-Champaign; P.E.

### Objectives

1. To provide a solid engineering education that is built on a strong liberal arts and science foundation.
2. To foster an instructional environment that promotes engineering design skills and inventive thinking.
3. To prepare students for successful careers or advanced study in engineering or other professional fields.
4. To prepare students to think employing Christian principles and to act ethically in providing service to their employers, communities, and churches.

### Curriculum

Union offers the Bachelor of Science in Engineering, BSE, with concentrations in electrical and mechanical engineering.

Students begin their preparation for engineering by enrolling in prerequisites and introductory engineering courses in the Fall Semester, assuring them an adequate foundation for engineering. These prerequisites provide students with a strong background in the physical sciences and mathematics, as well as the humanities. Incoming students are expected to have completed the necessary requirements that will allow them to begin mathematics

at the level of calculus. Ideally, engineering students will have been introduced to calculus in high school. These courses are combined with engineering courses to fully prepare the student for a successful professional engineering career. Students who do not have the appropriate math and science background will be carefully advised to take the proper courses to build the required foundation. This track will require approximately 5 years to finish, instead of a usual 4 years.

The engineering major must complete all General Core Requirements to include CHE 111 and MAT 211. The major must also complete the BSE Specific Core comprised of MAT 212, 213, 314 (11 hours); MAT 208 or 315 (3); CSC 255 or 245 (3); CHE 113 (2) and PHY 231-32 (10).

The student with an acceptable bachelors degree seeking the BSE as his second baccalaureate will complete CHE 111, MAT 211 and the BSE Specific Core as prerequisites to the major as well the major requirements described below.

### Engineering Major Requirements—61 hours

- I. Major core requirements—47 hours + a Concentration**
  - A. EGR 101, 105, 109, 210, 240, 250, 261, 262
  - B. EGR 330, 342, 360, 375
  - C. EGR 475, 491, 492, 498
- II. Mechanical Engineering Concentration—14 hours**
  - A. EGR 320, 352, 385
  - B. EGR 450, 456
- III. Electrical Engineering Concentration—14 hours**
  - A. EGR 361, 395 (3)
  - B. EGR 405, 416

### Assessment of Majors

Assessment of majors culminates with the Fundamentals in Engineering (FE) exam taken during the senior year. The test, prepared by the National Council of Examiners for Engineering and Surveying, is administered by the State of Tennessee as the first step toward becoming a licensed professional engineer. Throughout the program, however, the

student is monitored by a portfolio tracking system to ensure he/she will have attained all expected educational outcomes.

## Course Offerings in Engineering (EGR)

( ) Hours Credit; F–Fall, W–Winter; S–Spring; Su–Summer

### 101. Introduction to Engineering Design and Analysis (2) F

Provides an overview of the engineering profession, including technical and legal responsibilities, the design and analysis method, and application of the engineering process to problem solving.

### 105. Engineering Graphics (3) S

Graphical communication methods through one of the widely used software packages—ProE; covers 2-D projections and views, 3-D surface and solid modeling, and general concepts such as object dimensions and tolerances.

### 109. Introduction to Matlab and Computer Programming (2) S

Introduces computer programming using Matlab as a high-level programming language and Matlab as an engineering computational tool. Includes general computer programming principles and structures and the unique feature of Matlab, such as vector and matrix operations, with application to engineering.

### 210. Materials Engineering (3) S

Prerequisite: CHE 111, PHY 231.

Examines the structure of material at the atomic level, including how physical, thermal, and mechanical properties affect the behavior of materials.

### 240. Mechanical Engineering Fundamentals I: Mechanics (3) F

Prerequisites: MAT 212 and PHY 231

Introduces vector analysis of forces and torques. Examines rigid bodies and determinate structures at equilibrium. Covers kinematics of a particle and of a rigid body. Presents kinetic analysis using force-acceleration, work-energy, and impulse-momentum techniques.

### 250. Mechanical Engineering Fundamentals II: Thermo-fluid Dynamics I (4) S

Prerequisite: CHE 111, PHY 232; Corequisite: MAT 314.

Introduces macroscopic concepts of thermodynamics, including first and second laws, properties of a pure substance, and energy analysis; also introduces hydrostatics and fluid dynamics, including pressure distribution, relations for fluid particles, and development of conservation theorems. Includes weekly lab.

### 261. Electrical Engineering Fundamentals I: Digital Logic (3) F

Basic Principles of logic design, including Boolean algebra, number systems, combinational and sequential logic, and programmable logic devices. Introduces computer simulation techniques for logic circuits.

### 262. Electrical Engineering Fundamentals II: Electric and Electronic Circuits (4) S

Prerequisites: PHY 232 and MAT 212

Fundamental concepts of circuits and electronics, including basic concepts, theorems, and laws of dc and ac circuits. Introduces power sources, passive circuit devices, op amps, and selected semiconductor devices. Includes a weekly lab.

### 320. Mechanics of Materials (3) F

Prerequisite: CHE 111, PHY 231, MAT 314.

The relationship between internal stresses and changes of form produced by external forces acting on solid bodies; also covers normal and shear stresses, strain, elasticity and plasticity, deformations, and loading.

### 330. Engineering Economy (3) S—As Needed

Presents basic principles of economic analysis related specifically to the realm of engineering; covers methods of developing engineering alternatives to capital investment projects using economic and financial principles.

### 342. Engineering Experimental Methods (3) F

Prerequisite: Jr. Standing.

Teaches computer-based tools for engineering data analysis and experimental design; includes probability, statistical analysis, measurement errors, and graphical presentation methods.

### 352. Mechanical Engineering Laboratory (1) S

Prerequisite: EGR 342.

Demonstrates laboratory experimentation as a design and modeling tool. Emphasizes design of experiments and communicating engineering results. Includes planning, executing, and reporting on an area chosen by the students.

### 360. Modeling and Analysis of Linear and Dynamical Systems (3) F

Prerequisite: EGR 240, EGR 262, and MAT 314.

Presents analysis of linear time-invariant (LTI) systems using time-domain and frequency-domain techniques. Electrical and mechanical system dynamics are characterized and modeled using differential equations, impulse response, and Laplace and Fourier techniques. Includes extensive use of Matlab.

### 361. Digital Electronics (4) F

Prerequisite: EGR 261

Design and simulation techniques for digital systems, including optimal state assignment and state reduction for sequential circuits, circuit fault analysis, and higher level conceptual modeling. Covers system level topics such as computer organization and design test techniques. Includes a weekly lab.

### 375. Power Systems and Electrical Machines (3) S

Prerequisite: EGR 262.

Introduces the basic principles of power systems and electrical machines with an emphasis on 3-phase power, theory of machinery, and principles of machine operation. Topics include transformers, electro-mechanics, synchronous machines, induction motors, and DC motors and system-level topics such as power flow, faulty analysis, and economic operation.

**385. Energy Conversion (3) S**

Prerequisite: EGR 250.

Provides a comprehensive analysis of current energy systems, including fossil power plants, nuclear plants, and other forms of renewable energy sources; covers the Rankine cycle, steam generators, combustion, and turbines; presents information on the environmental impact of energy generation.

**405. Electronic Circuit Analysis and Design (4) S**

Prerequisite: EGR 262.

Introduces fundamental principles of electronics, including analysis and design techniques for circuits containing diodes, field effect transistors, and bipolar junction transistors. Includes weekly lab.

**416. Physical Principles of Solid State Devices (3) S**

Prerequisite: EGR 210. Reciprocal credit: PHY 416.

Introduces concepts in material science and quantum physics, including modern theory of solids, magnetic and optical properties of materials, semi-conductors and semi-conductor devices, dielectric materials, and superconductivity.

**450. Thermo-fluid Dynamics II (4) F**

Prerequisite: EGR 250.

Properties of the ideal gas, models of incompressible and corresponding states, gas-vapor mixtures, availability and irreversibility, power and refrigeration cycles, viscous and boundary-layer flow, inviscid incompressible flow, compressible flow, and turbo-machinery. Includes weekly lab.

**456. Machine & Mechanism Theory & Design (3) S**

Prerequisite: EGR 360.

Covers design, selection, and evaluation of mechanisms for various applications, including planar and spatial linkages, cams, gears, planetary and non-planetary gear systems, linkage synthesis, and linkage dynamics.

**470. Heat Transfer (3) S**

Prerequisite: EGR 450.

The analysis of various heat transfer modes, including conduction, natural and forced convection, and radiation; introduces industrial applications of heat transfer such as heat exchangers, waste heat recovery, and steam generators in a nuclear plant or in a gas turbine electrical generator.

**475. Control Theory and Design (4) F**

Prerequisite: EGR 360.

Introduces analysis and design of linear control systems using root locus and frequency response techniques; includes system representation and control system characteristics. Includes weekly lab.

**491. Major Project Design I (3) F**

Prerequisite: Senior Standing.

Allows a student to work individually on a real-world engineering problem assigned by either the instructor or a sponsoring industry; requires the student to solve the problem by applying the engineering design and analysis method; involves oral and written presentations, where the written presentation is in the form of a design portfolio that documents a full engineering study of the project.

**492. Major Project Design II (3) S**

Prerequisite: Senior Standing.

Allows a team of students to work on a real-world engineering problem assigned by either the instructor or a sponsoring industry; requires the student to solve the problem by team effort via project management; involves oral written presentations, where the written presentation is in the form required for EGR 491. The oral presentation will be a publicly announced event.

**498. Engineering Seminar (1) S**

Prerequisite: Senior Standing.

Provides an opportunity for students to discuss professional ethics and Christian conduct as engineers through case studies. Includes also presentations by engineers from local industry on current topics.

**499. Seminar (1-3) As Needed**

To be used at the discretion of the department.

**179-279-379-479. External Domestic Study Programs (1-3) As Needed**

All courses and their applications must be defined and approved prior to registering.

**180-280-380-480. Study Abroad (1-4)**

All courses and their application must be defined and approved prior to travel.

**195-6-7. Special Studies (1-4)****295-6-7. Special Studies (1-4)**

Lower-level group studies which do not appear in the regular department offerings.

**395. Special Studies (3)**

Upper-level group studies applicable to electrical engineering which do not appear in the regular department offerings.

**396-7. Special Studies (1-4)**

Upper-level group studies which do not appear in the regular department offerings.

**495-6-7. Independent Study (1-4)**

Individual research under the guidance of a faculty member.
